

EXPLANATION

- |  |  |
|--|--|
|  | Contact, approximately located—Not shown beneath surficial deposits  |
|  | Fault, approximately located—Dotted where concealed. Bar and ball on downthrown side, where direction of movement is known   |
|  | Anticline or arch, approximately located, showing position of crestline  |
|  | Syncline or basin, approximately located, showing position of troughline   |
|  | Structure contour—Drawn on base of Bethel Sandstone. Projected where contour horizon is missing, not shown in areas of complex faulting or where data are insufficient. Arrows indicate direction of dip. Contour interval 50 feet |
|  | Dry hole—Oil or gas test   |
|  | Drill hole that intersects lamprophyre dike or sill in subsurface  |
|  | Mine—Fluorspar, zinc, or barite  |
